(54) Lens driving apparatus for disk player

(57) In the lens driving apparatus of a disk player, a pair of magnets 20 for generating magnetic fields are fixed to a pair of yokes 21, respectively to generate a magnetic gap therebetween. The pair of yokes 21 are oppositely arranged on and fixed to a plate-like actuator base 10 by plural screws 12 through a fixing member

11. A movable portion 50 is movably hung by four supporting wires 32(or plate screws) on a supporting base 31 that is fixed to the actuator base 10. The movable portion 51 is arranged within the above magnetic gap. In such a configuration, the apparatus for a disk player can shift a natural resonance frequency to a high frequency and can be operated at a high speed.

FIG. 1A

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 11 8098

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
